# Aged Care Security Solutions

At Gallagher, we know that creating a safe and secure environment for staff, residents, and visitors is at the heart of what you do. Gallagher's industry leading security solutions give you peace of mind that your facility is efficiently managed; creating a safe and secure environment for people to work, live, and visit.

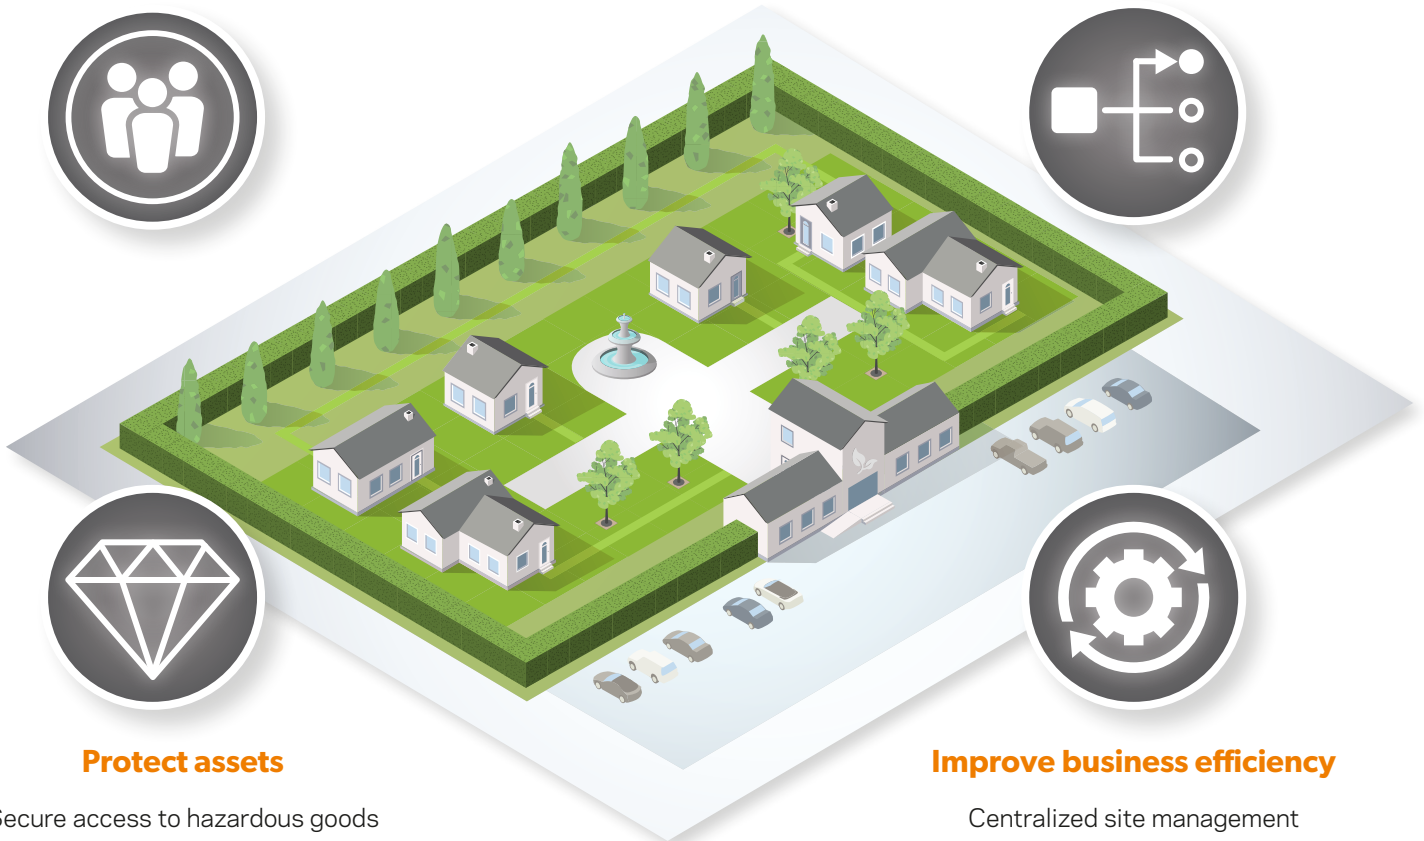

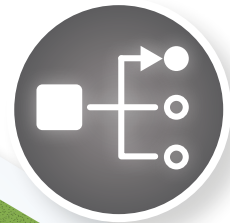

## Keep people safe

- Secure facility access
- Rapid evacuation and lockdown
- Quick, accurate communication

## Optimize facility use

- Streamlined resource utilization
- Simplified administration
- Reduced costs

## Protect assets

- Secure access to hazardous goods
- Intelligent alarm monitoring
- Agile staff locker management

## Improve business efficiency

- Centralized site management
- Improved scalability
- Third-party integration (HR, CCTV)

# Keep people safe

Keeping people safe is at the core of the Gallagher solution. From securing rooms, managing access to drugs, through to ensuring rapid response with integrated paging systems, Gallagher has a range of security solutions that are proven in the aged care industry.

## Keep staff and residents safe

Gallagher's access control solutions allow you to intelligently manage staff and resident movements.

- Independent living facilities can effectively operate a "one-card" access system where residents can use their unit/apartment access card for entry to other areas of the complex.
- Lost or previously issued cards can be promptly cancelled, greatly reducing the risk of unauthorised access to a resident's personal accommodation.

## Keep high-risk patients safe

Gallagher are leaders in delivering solutions for heavily regulated and high-risk industries and our technology is well suited to keeping high-risk patients safe.

- Detect and track the location of wandering patients across high-risk units and dementia wards.
- Ability to evacuate or lockdown the whole or portion of the facility - lockdown specific areas or the complete building in the event of an emergency, which can be useful on wards where there are wandering patients.

## Keep visitors safe

Ensure people only have access to areas they are qualified to be in, and effectively manage compliance with your organizational policies and government regulations.

- Manage visitor and contractor access on and off-site, including updating visitor details, capturing photos, printing visitor labels, assigning escorts, and issuing access cards.
- Ensure people are in the right place at the right time, and visiting times are adhered to.

## Protect hazardous goods and valuable possessions

Gallagher's industry-leading integrated security solution can meet the additional risks and challenges faced in care-environments, including on-site hospital wings, medical and drug supply rooms, dementia units, and potentially vulnerable residents.

- Grant access to specific areas based on enrolment or HR information, or individual competencies including inductions, licences, training, and qualifications.
- Supervise access to designated areas with intelligent alarm monitoring and advanced site map functionality.
- Restrict unauthorized access to high-risk areas such as medical and drug supply rooms, hospital wings and high-dependency units.
- Use zone counting to monitor the number of people in an area at any time.
- Secure staff lockers with Command Centre's intelligent locker management.

# Optimize facility use

Gallagher Command Centre allows you to efficiently manage multiple sites and buildings, each with different requirements, from one centralized system. Gallagher solutions reduce unnecessary costs by optimizing facility use and lowering energy consumption.

## Business efficiency and cost savings

Gallagher's integrated security solutions allow you to manage site security, control building management systems, and increase system efficiency – reducing operational and training costs, energy use, and utility costs.

- Secure a large number of independent doors with wireless electronic locking systems.
- Decrease energy consumption through interfaces with lighting, heating, and ventilation systems, lock or unlock rooms, and activate room services such as lighting and air conditioning based on scheduled bookings.
- Reduce costs through automation by managing cameras, electronic gates, and car park lighting through Command Centre.
- Monitor and control HVAC (heating, ventilation, and air conditioning), air quality and other building management systems using the BACnet protocol.

## Simplify administration

Simplified administration processes save time and money, while improving staff productivity – freeing them to spend more time with residents.

- Manage access to hospital rooms, elevators, accommodation, parking, lockers, printing facilities, meeting rooms, and common use areas from one central system.
- Use Gallagher's Mobile Connect app just like an access card, or distribute Photo ID and encoded access cards to visitors in advance, so they are automatically granted access on arrival.
- Move to a single card solution to reduce the expense involved with the replacement of lost resident access cards, ID cards, and keys.

## Powerful reporting

Command Centre's comprehensive range of reporting options keep you informed to make data-driven decisions.

- Ease administration burdens with simple, automated customizable reporting.
- Retrieve and report on stored information including resident and staff location, resource utilization, competencies, and resident call-button activity.
- Create records about site activity and produce audit trails for both internal reference and regulatory compliance.

# Improve business efficiency with integration

Command Centre is designed to integrate seamlessly with a wide variety of business and people management systems, allowing you to optimize your facility through intelligent use of data on a centralized platform.

Command Centre server interfaces provide a bridge between external sources of data and the information in Command Centre. Typical data sources include human resource databases, payroll, time and attendance, health and safety databases, and facility resource booking systems.

- Integrating with Human Resources systems allow a single point of reporting for nurse call alarms, which can then be integrated with CCTV recording.

- Seamlessly integrate with third-party systems, such as wireless readers, biometric readers, long range readers, elevators, intercoms, CCTV, and key safes.
- Using biometric readers can help reduce the security risk of well-known or forgotten pin pad codes.
