

Commercial Buildings Security Solutions

Smart, connected security for the world's
most iconic commercial buildings

security.gallagher.com

Intelligent buildings run on connected security. Gallagher Security's unified security solutions work quietly behind the scenes enabling frictionless access, connected experiences, and smooth, secure operations. All managed from a single platform.

We've got the whole building talking

Connect everything. From turnstiles, intercoms, and elevators to car parks and visitor management, all from one platform. As one of the most feature-rich platforms available, Gallagher's Command Centre connects with a wide range of security and business systems, across access, video, building management, and more. It's the ecosystem that enables a frictionless experience, street to seat, reducing risk, and enabling smarter decision-making across your entire site.

Visitor management

Frictionless access and connected experiences shouldn't stop at reception. Create a seamless, secure visitor experience from arrival to departure. Visitor Management powered by Kenai simplifies how commercial buildings manage guests, while giving tenants and security teams greater visibility and control over who is onsite.

- Enable visitors to pre-register before arrival, reducing reception queues and improving the visitor experience.
- Streamline check-in with self-service kiosks, reception-based registration and QR code identification.
- Automatically capture visitor details and maintain a real-time record of who is onsite.
- Easily manage visitor access, hosts and visit information through a centralized platform.
- Provide tenants with a simple way to pre-register and manage their visitors.
- Support health, safety and compliance requirements with clear visibility of visitor activity.
- Maintain a complete audit trail of visitor activity, including check-in, check-out and access events.

Elevator integration

Security that enables a frictionless journey, street to seat, through the front door, into the elevator, and on to the first meeting. Gallagher supports all major destination dispatching elevator systems, including Schindler, Kone, TKE, and OTIS. Each floor is set as secure or free, and a cardholder's access zones are sent to the elevator system in real time, so a single credential takes them straight to the right floor.

Passenger preferences, including accessibility and home floor, ensure a comfortable journey for every occupant. Where destination dispatching is in place, passengers select their floor before boarding and are grouped with others heading to nearby floors, cutting unnecessary stops and congestion during peak periods.

Mobile credentials and digital wallets

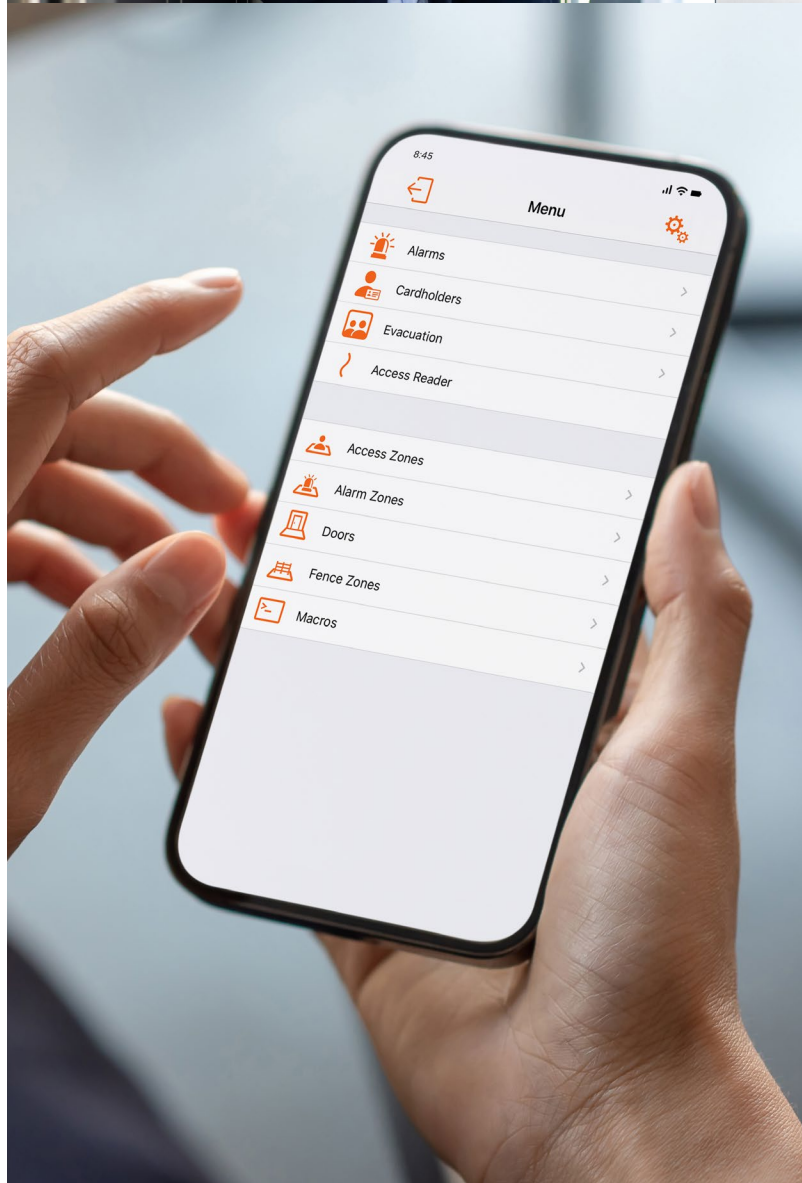

Security technology and customer expectation evolves rapidly. To stay ahead of the game and meet changing tenant needs, security solutions must be adaptable, intuitive, and importantly, they need to be mobile.

A single device now acts as an entry key, an identity token, and a gateway to a building's digital services.

Mobile badging, automated messaging, and seamless integration between mobile control and building management systems are just some of the functionality delivered by Gallagher's award-winning mobile connect solution.

Utilizing employee badge in Apple Wallet, users don't even need to open an app, seamlessly badging in via phone or watch.

Optional two-factor authentication (credential plus PIN, fingerprint, or Face ID) lets you add an additional security step, ensuring the person coming through the door is exactly who they say they are.

Real time reporting

Take back your hours lost to building admin.

Command Centre's real time reporting features allow you to identify where hardware is operating well and make informed decisions about where to focus your resources.

Reliable door, zone, and turnstile status reporting flags maintenance issues before they become downtime. While integration with video management systems provides you with a visual and audible record of events, which can be relied upon as evidence if required.

Command Centre's flexible, powerful auditing and reporting capabilities help you easily and quickly produce information to prove compliance with regulations and requirements, while reducing administrative time and cost.

Sustainability and energy efficiency

Turn everyday access data into your building's sustainability engine. Unlock energy savings and sustainability compliance.

Real-time occupancy data lets your building respond automatically. Temperatures adjust. Lights dim when spaces empty. Systems power down, then up, exactly when needed, cutting energy costs and supporting sustainability reporting.

World-class buildings choose Gallagher Security

With a network of highly skilled and experienced Channel Partners across the globe, we're in a great position to connect and introduce the right people for your Commercial Building.

For more information or to find out why world-class buildings choose Gallagher Security, get in contact with your Certified Channel Partner, or with the Gallagher team.
