

The Gallagher delivery model

Your product journey explained

During times of global crises, Gallagher has proven we can continue to supply solutions to protect what matters most.

The secret is our vertically integrated manufacturing and engineering powerhouse, combined with the long-term, highly trusted relationships we hold with our supply chain.

For more than 80 years, Gallagher has manufactured and distributed innovative, high-quality products and solutions from our global headquarters in Hamilton, New Zealand. We design, manufacture, and distribute our security solutions from our Hamilton site – offering complete oversight of our manufacturing and distribution process. We employ a dedicated supply team who proactively monitor our position to ensure material availability, while our data scientists create scenario models to predict usage and guarantee certainty of supply into the future.

Electronic components and raw materials, such as blank PCBs, bare steel, and polymer pellets, feed into on-site tool design and manufacture, plastic injection moulding, and Surface Mount Technology (SMT) manufacture, before passing through world-class lean manufacturing cells and

workstations. Strict quality controls in place throughout each step of our process guarantee quality of our finished products.

Orders are distributed from our Hamilton site to our global Gallagher warehouse networks, before making their way to you. We pride ourselves on next-day distribution for over 95 per cent of our purchase orders.

Our Hamilton headquarters and regional sites around the world are continuously growing to meet global demand. Our global engineering powerhouse ensures we can continue to supply our solutions to support our partners and customers now, and into the future.
